(54) COATING FILM AND ITS PRODUCTION

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a coating film which is producible in good productivity and still substantially retaining water resistance and gas barrier properties.

SOLUTION: An aqueous coating fluid containing at least a poly(meth)acrylate polymer, a polyalcoholic polymer and an aqueous medium is applied to at least either surface of the coating film 2 to be coated to form a coated film on the coating surface of which a coat layer 3 is formed. The coated film 1 in the state in which the aqueous medium still present in the layer 3 is stretched and heat-treated.
